Status Overview

Manual changes

The screenshot displays the Oracle VM Manager web console interface. The top navigation bar includes tabs for Health, Servers and VMs, Repositories, Networking, Storage, Reports and Resources, and Jobs. The main content area is divided into two sections: Servers and VMs, and Repositories.

**Servers and VMs Section:**

Name	Status	Tag(s)	Event Severity	Server	Max. Memory (MB)	Memory (MB)	Max. Processors	Processors	Keymap	Operating System
FCSV195 Mapni...	Running		Informational	sv096	2048	2048	1	1	de	Other Linux
FCSV196 PostGis	Running		Informational	sv096	4096	4096	4	4	de	Other Linux
sv103	Running	stredax.e	Informational	sv095	8192	4096	2	2	en-us	Oracle Linux 6
sv104	Running	stredax.e	Informational	sv094	8192	8192	2	2	de	Oracle Linux 6

**Repositories Section:**

Name	Used (GiB)	Max (GiB)	Shareable	Absolute Path	Mounted Path	File	Description

# Oracle VM Command Line Interface (CLI)

## Introduced

- OVM 3.1

## Accessible

- via ssh

## Own

- parser
- syntax

## Architecture

- REST calls to core

```
[root@isdkoosv127 scripts]# ssh ovmcli show virtualdisk id=0004fb00001200000889983661c45bf4.img
OVM> show virtualdisk id=0004fb00001200000889983661c45bf4.img
Command: show virtualdisk id=0004fb00001200000889983661c45bf4.img
Status: Success
Time: 2017-03-04 22:25:48,310 CET

```

# OVM CLI

## Pros

Accessible via ssh

Well documented:

- Oracle® VM Manager Command Line Interface User's Guide for Release 3.4

Mode:

- Synchronous
- Asynchronous

## Cons

Own parser

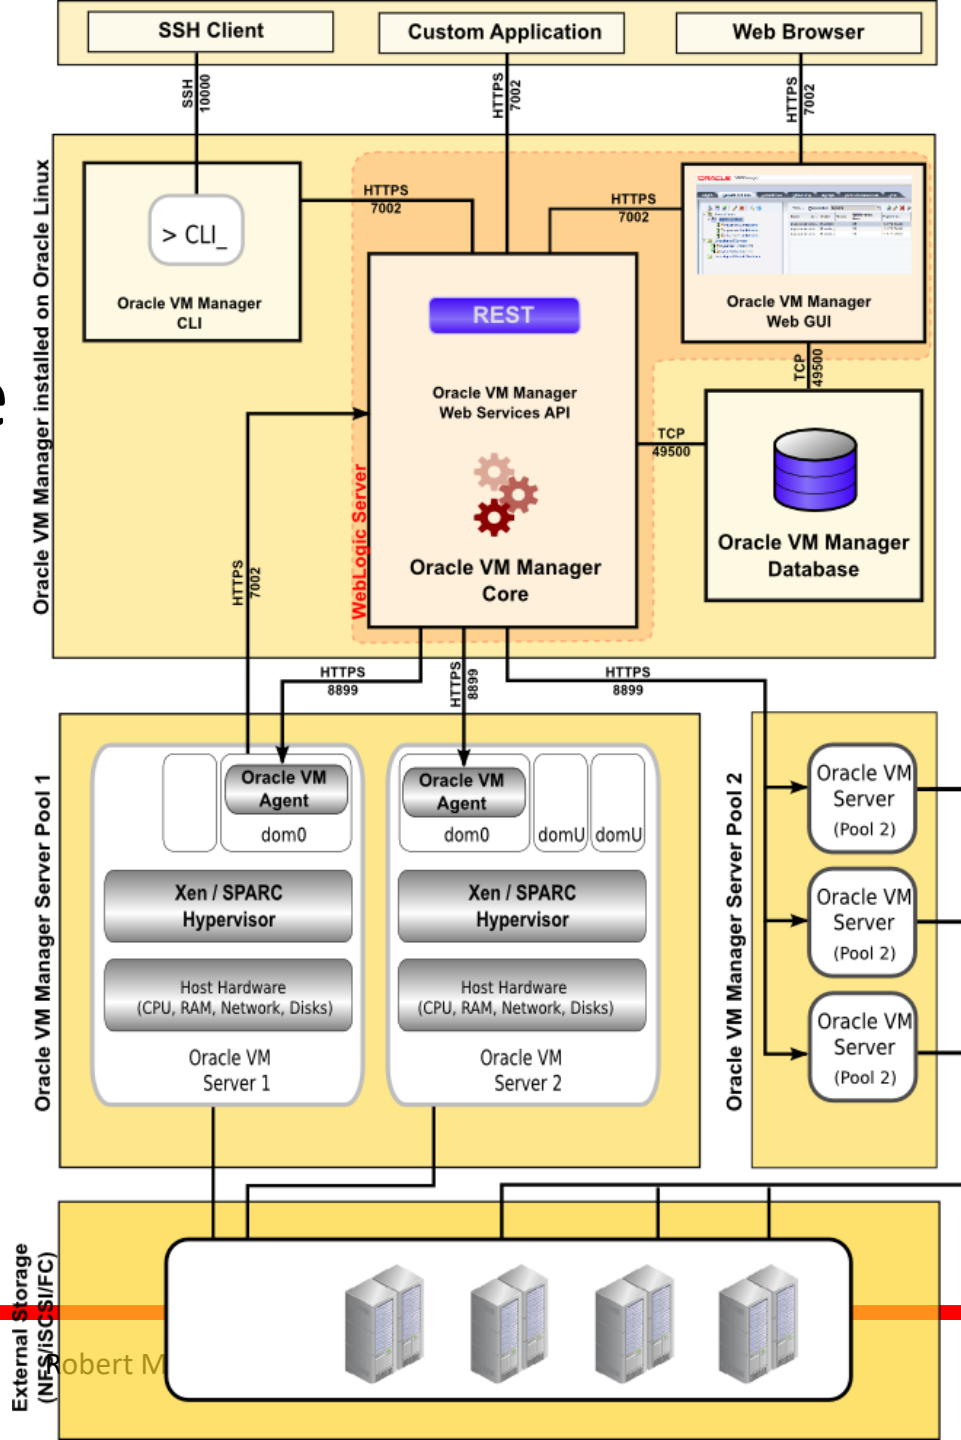

- weird behavior

ssh key authentication

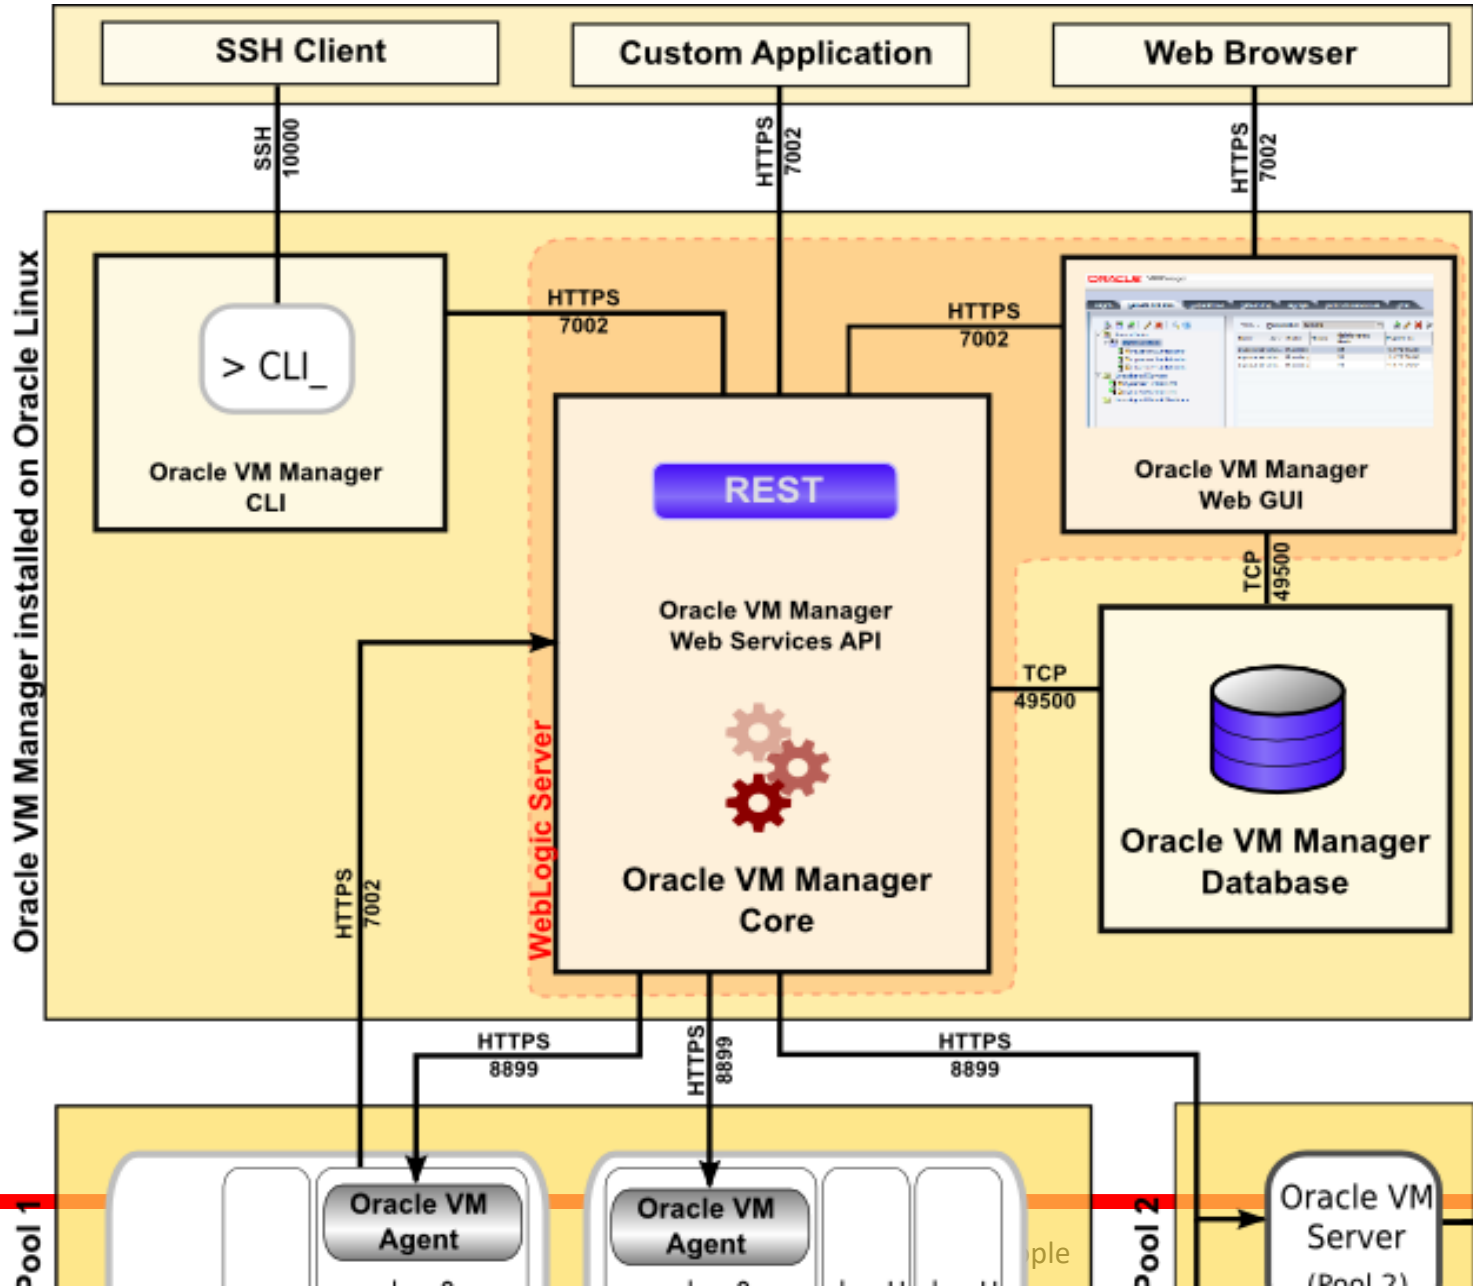

- First use after VM Manager restart requires password

## Oracle VM Architecture

[Oracle VM Concepts Guide for Release 3.4](#)

REST	<b>RE</b> presentational <b>S</b> tate <b>T</b> ransfer	
	programming paradigm	Distributed Systems Web Services
RESTful Applications	implements 6 constraints most important:	Uniform Interface (API via URIs) Stateless Cacheable
Implementation	Transport protocol	http(s)
	content	JSON Documents XML Documents

Host:Port

https://192.168.56.101:7002/ovm/core/wsapi/rest/...

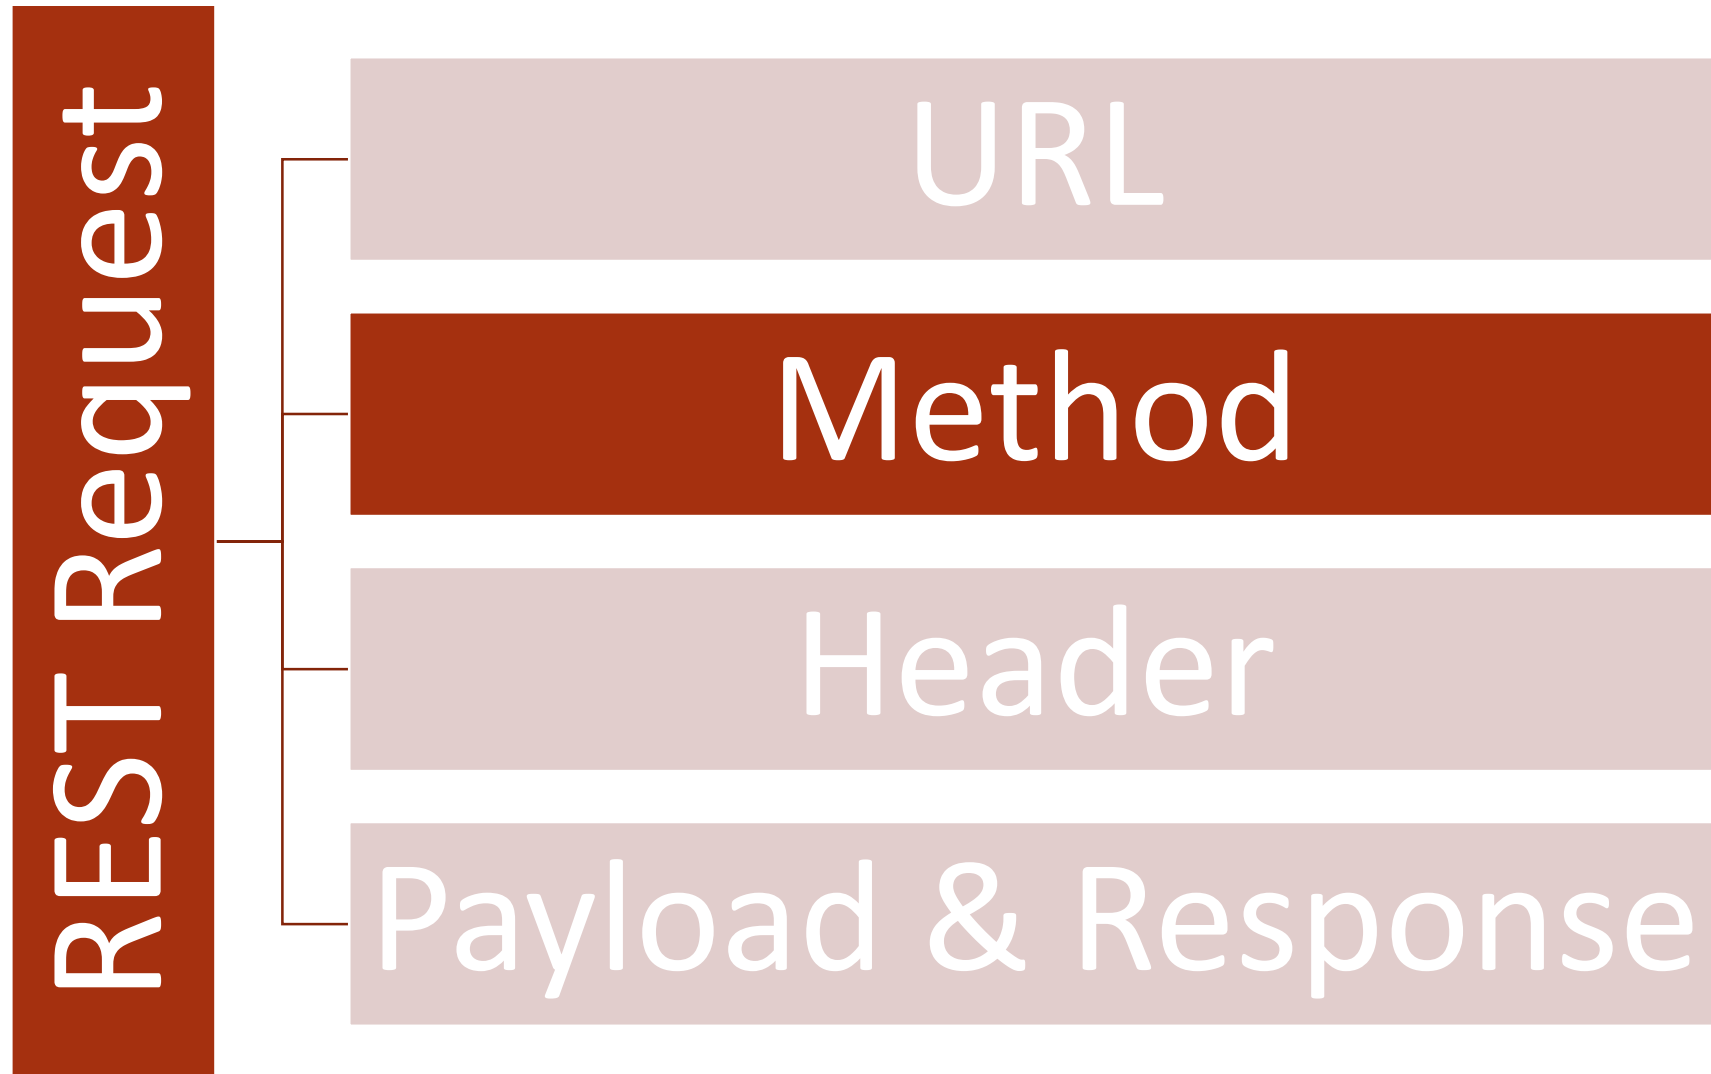

Protocol

REST Base URI

Object Id

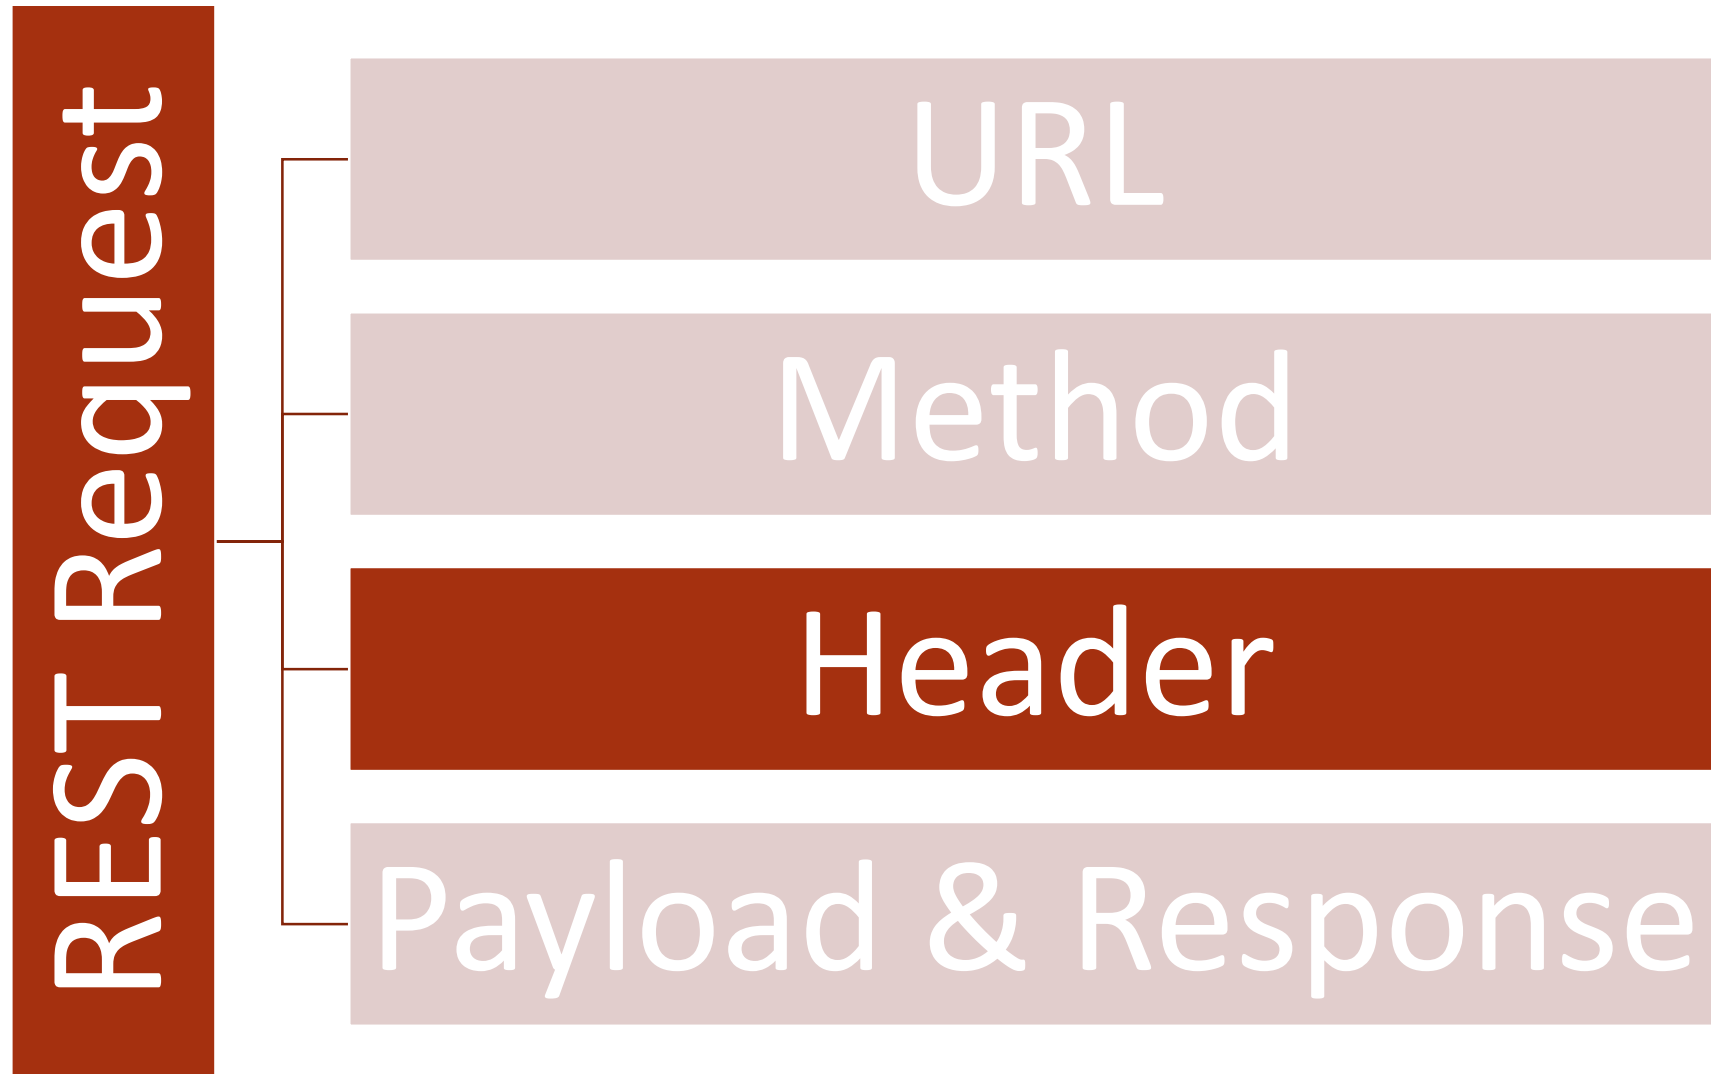

.../VMDiskMapping/0004fb0000130000aacb39aab2440b9f

Object Type

# OVM REST Methods

HTTP Method	Operation	URI Path
GET	Get all	/ObjectType
	Get all IDs	/ObjectType/id
	Get by ID	/ObjectType/{id}
	Get child associations	/ObjectType/{id}/ChildType
	Get child association IDs	/ObjectType/{id}/ChildType/Id
PUT	Modify	/ObjectType/{id}
	Action	/ObjectType/{id}/action
	Add child association	/ObjectType/{id}/addChildType
	Remove child association	/ObjectType/{id}/removeChildType
POST	Create	/ObjectType
	Create child Object	/ParentType/{id}/ChildType
DELETE	Delete	/ObjectType/{id}
	Delete child Object	/ParentType/{parentId}/ChildType/{childId}

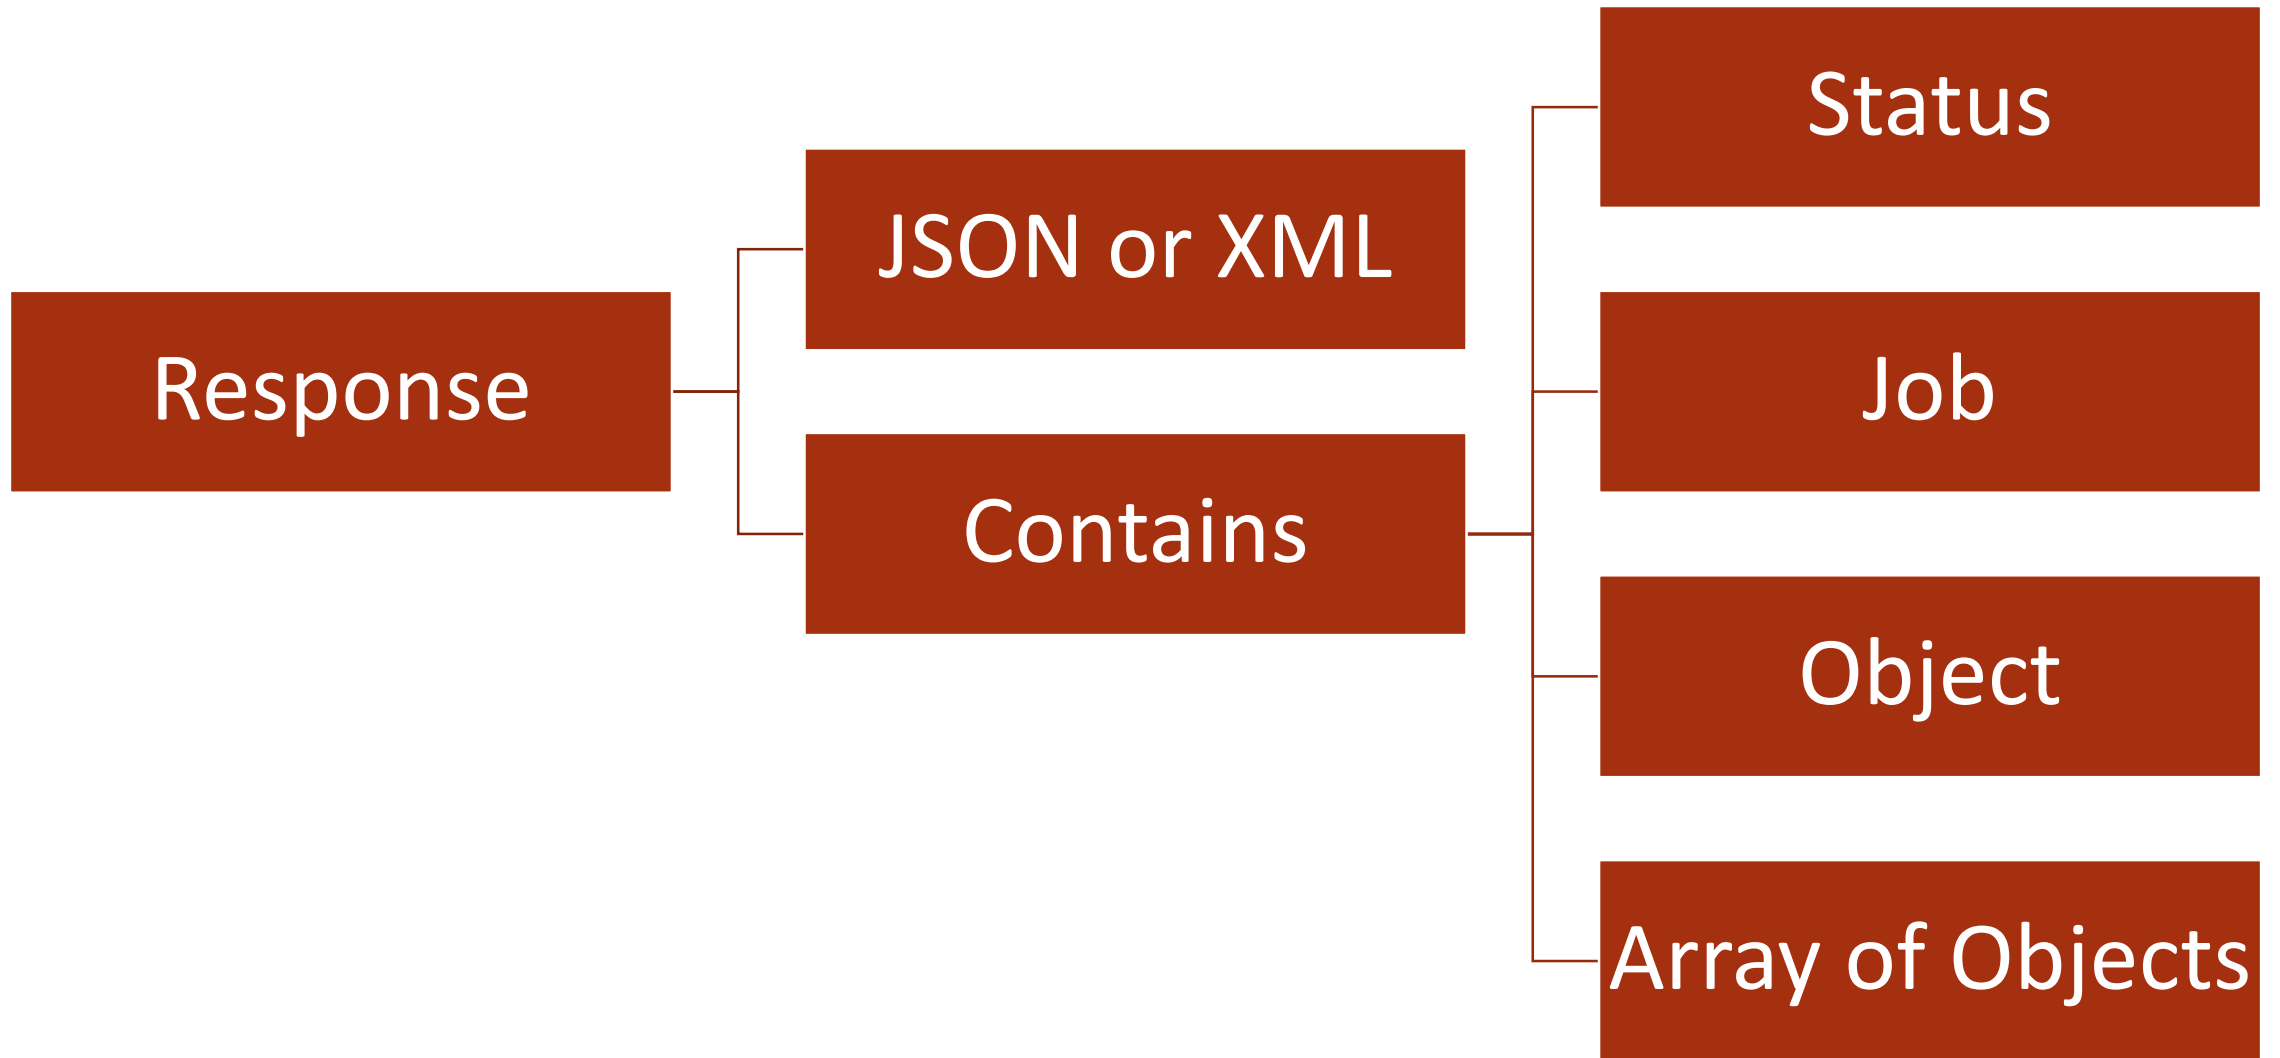

HTTP Header Field	Content	Effect
Accept	application/xml	Server responds in XML
	application/json	Server responds in JSON
Content-Type	application/xml	Server expects XML payload
	application/json	Server expects JSON payload
Cookie	_WL_AUTHCOOKIE_JSESSIONID=6CT2CZ5eZ...	Session Cookie – no further auth required
Authorization	Basic QWxhZG....	Encoded Credentials – no cookie necessary

# OVM REST Payload & Response (2/2)

# JSON

Java Script  
Object Notation

```
{
  "name": "STOCKTICKER",
  "primarykey": [
    "symbol",
    "tstamp"
  ],
  "members": [
    {
      "name": "symbol",
      "type": "VARCHAR2"
    },
    {
      "name": "tstamp",
      "type": "DATE"
    },
    {
      "name": "price",
      "type": "NUMBER"
    }
  ],
  "links": [
    {
      "rel": "collection",
      "href": "http://192.168.56.101:8080/o",
      "mediaType": "application/json"
    },
    {
      "rel": "canonical",
      "href": "http://192.168.56.101:8080/ords/rmougprov/metadata-catalog/tab-StockTicker/"
    },
    {
      "rel": "describes",
      "href": "http://192.168.56.101:8080/ords/rmougprov/tab-StockTicker/"
    }
  ]
}
```

Think of XML with  
<Tags> replaced by  
brackets

Schemaless

“Key”：“Value” Pairs

{ } – Groupings

[ ] - Arrays

no constraints for your implementation

Developers hell when dealing with  
documents not produced by your code

## Basic Auth

Provide “Basic Auth” with every REST request

---

### Pro

Easy to implement

---

No Overhead / Checks needed

---

### Con

Every Request gets own session

---

Resource intensive on OVM Manager

---

# REST Login

POST Request with Basic Auth to  
ovm/core/wsapi/rest/login

Extract Cookie  
„\_WL\_AUTHCOOKIE\_JSESSIONID “

Use as Session-Cookie for all subsequent Calls

Pro

Session Lasts in OVMM

Faster Response time

Con

Overhead implementing login and  
alive checks

## SSL Cert

Login using SSL certificates with every call

---

Pro

Convenient: No Credentials needed

---

Con

Setup overhead on Client & OVM Manager

---

Works only from Client with certs installed

---

# Demo with REST Client

Import from Url

## The API is normalized

Actions are implemented only once

Not always intuitive

## Example VirtualDisk:

Query: GET /VirtualDisk/{virtualDiskId}

Modify: PUT /VirtualDisk/{virtualDiskId}

Create: POST /Repository/{repositoryId}/VirtualDisk

Delete: DELETE /Repository/{repositoryId}/VirtualDisk/{virtualDiskId}

# Automatization & Reporting

Actions are asynchronous

Always return Job-Object  
Query Job-Id for Status

Messing with OVM Manger can be dangeous

Easy to destroy Disks, VMs or Repositorys

Good Practice:

Implement your own API, e.g. clone Disk

Setup simple Reportings

e.g. Orphaned Disks
