A woman with dark hair in a braid, wearing a black and grey striped long-sleeved shirt, is climbing a grey metal ladder. She is looking through black binoculars. The background is a high-angle view of a city with many skyscrapers, partially obscured by a layer of white clouds. The sun is shining from the upper left, creating a bright, hazy atmosphere.

RESTful Apps & Oracle ORDS: An Overview

Oracle Application Express 3-Tier Architecture

ORDS = Oracle REST Data Services

Oracle REST Data Services (ORDS)

Evolved

from APEX Listener

Deploy in Application Server

- Tomcat
- Glassfish (deprecated)
- WebLogic

ords.war

Java Web Archive

Standalone mode

Brings own http-server
Supported for Production
java -jar ords.war

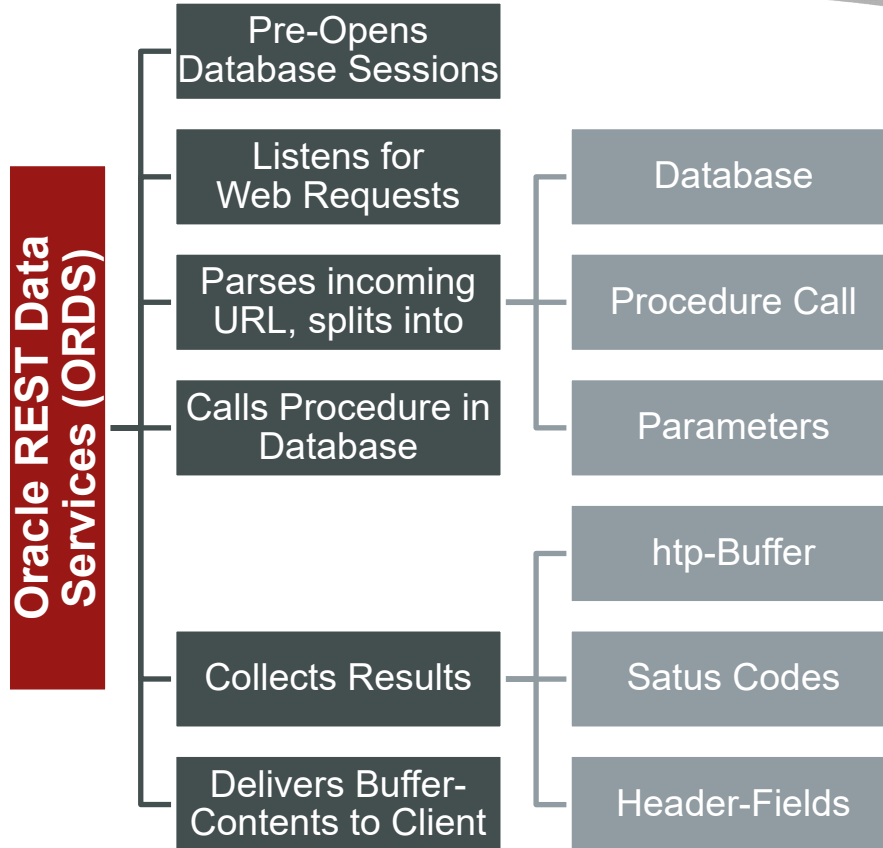

What is REST

REST	Representational state transfer	doctoral dissertation by Roy Fielding, 2000
	programming paradigm	distributed systems Web services.
RESTful Applications	implements 6 constraints	Uniform Interface (API via URIs) Stateless , Client-Server, Layered System Cacheable , Code on Demand
Implementation	Transport protocol	http(s)
	content	JSON Documents

What is ORDS' job?

A person is sleeping in a bed with light blue bedding and a grey eye mask. In the background, there is a metal plant stand with several potted plants and a white mug on a shelf. Dark grey curtains are visible on the left side of the frame.

RESTful Services with ORDS AutoREST

Demo – Build a RESTfull Service in 100 seconds

Prerequisites

- Running Oracle DB 11gR2 or higher
- Schema with Table & Data
- DBA Access
- Installed & Configured ORDS

Tools

- Insomnia REST Client
- SQL Developer
- Oracle Visual Builder Add-in for Excel

Demo Sequence

- REST enable Schema
- REST enable Table
- Use REST Client to test
- Show Visual Builder Add-In

Build a RESTfull Service in 100 seconds

AutoREST

REST enable Table or Procedure very easy

Read / Write

Stateless / no transaction

SQLDeveloper Wizards

PL/SQL API

```
begin
  ords.enable_schema;
  commit; -- This commit is important!
end;
/
```

```
begin
  ords.enable_object (
    P_ENABLED      => true,
    P_SCHEMA       => 'RESTDBLINKSPROV',
    P_OBJECT       => 'STOCKTICKER',
    P_OBJECT_TYPE  => 'TABLE',
    P_OBJECT_ALIAS => 'tab-StockTicker',
    P_AUTO_REST_AUTH => false
  );
  commit; -- This commit is important, too!
end;
/
```

Case Sensitive

A thick red arrow pointing horizontally to the left, positioned to the left of the vertical text 'Case Sensitive'.

Anatomy of a ORDS AutoREST URL

ORDS Base

Table

Parameter

http://192.168.56.101:8080/ords/rdbl/Tab-StockTicker/?offset=55&limit=100

/ORCL,2016-01-08

PKCol1,PKCol2
or Primary Key

Protocol

Host:Port

Schema

HTTP Method	ORDS AutoREST Action
GET	Retrieve Data – Single Row or Rowset
PUT	Insert or Modify Row
POST	Bulk Insert csv-data
DELETE	Delete Row

Interpreting the ORDS AutoREST Responses (1)

```
1 {
2   "items": [
3     {
4       "symbol": "TDC",
5       "id1": 56,
6       "tstamp": "2017-05-06T23:27:00Z",
7       "price": 20.625,
8       "links": [
9         {
10          "rel": "self",
11          "href": "http://127.0.0.1:8080/ords/rdb1/Tab-StockTicker/56"
12        }
13      ]
14    },
15    {
16      "symbol": "ORCL",
17      "id1": 57,
18      "tstamp": "2017-05-06T23:28:00Z",
19      "price": 42,
```

Table Rows

**Columns &
Values**

```
1 ▾ {
2 ▸   "items": [↔],
28  "hasMore": true,
29  "limit": 2,
30  "offset": 55,
31  "count": 2,
32 ▾ "links": [
33 ▸   {↔},
37 ▸   {↔},
41 ▸   {↔},
45 ▸   {↔},
49 ▾   {
50     "rel": "next",
51     "href": "http://127.0.0.1:8080/ords/rdbl/Tab-StockTicker/?offset=57&limit=2"
52   },
53 ▸   {↔}
57 ]
58 }
```

Hypermedia as the Engine of Application State (HATEOAS)

PL/SQL

Procedures & Functions
Standalone or in Packages
No Overloading

POST Method only

More like RPC than RESTful Webservice
JSON Document required (can be empty)

JSON Response

All OUT & IN OUT-Parameter Values
Function Return Value

AutoREST PL/SQL vs ORDS REST Module

Similar effort, but
REST Module offers way more flexibility

A large, 3D-rendered red text 'PL/SQL' is positioned on the right side of the slide. The letters are thick and have a slight shadow. Behind the text is a large, light grey gear with a circular cutout in the center. The background is a light blue gradient with a subtle grid pattern.

API

Designing a REST API

APIs should be human readable

“Programs must be written for people to read,
and only incidentally for machines to execute.”

Harold Abelson, Structure and Interpretation of Computer Programs, 1984

This applies to APIs, as well.

Nouns / What?

Your API Objects

e.g. contracts, cars, VirtualMachines, ...

GET /products

GET /VirtualMachines/4711

Verbs / How?

http Methods

e.g GET, POST, PUT, DELETE

Relations

Sub-resources

e.g DELETE /VirtualMachines/4711/VMDiskMapping/5

HTTP Methods

Actions

part of http-request

Common
Methods

GET, POST, PUT, DELETE
OPTIONS, HEAD, TRACE
CONNECT

Expandable

Make up your own

The HTTP-Protocol - methods

Server

```
# Listens on Port 8080 like a Webserver  
nc -l 8080
```

```
GET /ords/VM/4711 HTTP/1.1  
Host: localhost:8080  
User-Agent: curl/7.58.0  
Accept: */*
```

```
POST /ords/VM/4711 HTTP/1.1  
Host: localhost:8080
```

...

```
TRALALLA /ords/VM/4711 HTTP/1.1
```

...

Client

```
curl \  
  http://localhost:8080/ords/VM/4711
```

```
curl --request POST \  
  http://localhost:8080/ords/VM/4711
```

```
curl --request TRALALLA \  
  http://localhost:8080/ords/VM/4711
```

HTTP Status Codes

1xx Informational
„Hold on“

100 Continue

101 Switching Protocols

102 Processing

2xx Success
„Here you go“

200 OK

201 Created

208 Already Reported

3xx Redirection
„Go away“

301 Moved Permanently

304 Not modified

307 Temporary Redirect

4xx Client Error
„You fucked up“

400 Bad Request

401 Unauthorized

404 Not Found

5xx Server Error
„I fucked up“

500 Internal Server Error

502 Bad Gateway

503 Service Unavailable

- Try it, Test it
- Be redundant
- Use nouns, but no verbs, Nouns are plural
- GET method should never alter states
- Use HTTP headers
- Use **Hypermedia as the Engine of Application State (HATEOAS)**
- Provide Filtering, Sorting, Field Selection & Paging

Building ORDS RESTful Services

Connection Tree

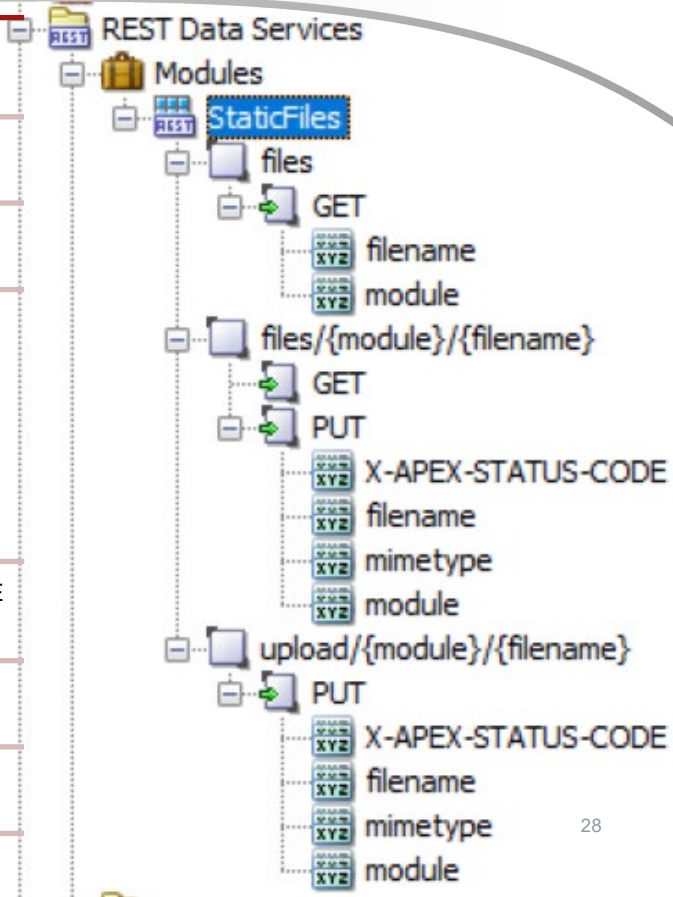

Right Click
Schemas & Objects
REST Data Service Node

SQL Worksheet

Right Click Query Results

REST Data Service

Module	logically groups a set of URLs	Like a PL/SQL Package
	Name	Include API Version# In Name & URI Prefix
	URI Prefix	Part of the URL
Template	URI Pattern	following URI Prefix from Module may contain parameters
	Handler	http-Methods one per Template
Handler	Parameters	http-header URI
	Your Code	goes here

Handlers & Parameters

Handler: Source Type

All Handlers:

PL/SQL

GET Handler
(Output Format varies)

Collection Query [Item]; Query [One Row]; Feed

Media Ressource

Handler: Results

All Handler

JSON

GET Source-Type

Query: JSON or CSV

Media Ressource: Binary

Parameter

Types

In

Out, In / Out

passed as
Bind Variables

Source Type

http-Header

URI

A person in a dark suit and blue tie is shown from the chest up, interacting with a futuristic digital interface. The interface consists of two large, circular, glowing blue panels. The left panel features a fingerprint scanner icon, and the right panel features a white padlock icon. A bright yellow light beam connects the two panels. The background is dark with some light flares.

Secure your Webservice

Choose your Option: Basic or OAuth

Always use https for prod

- Credentials and tokens are easy prey

Basic

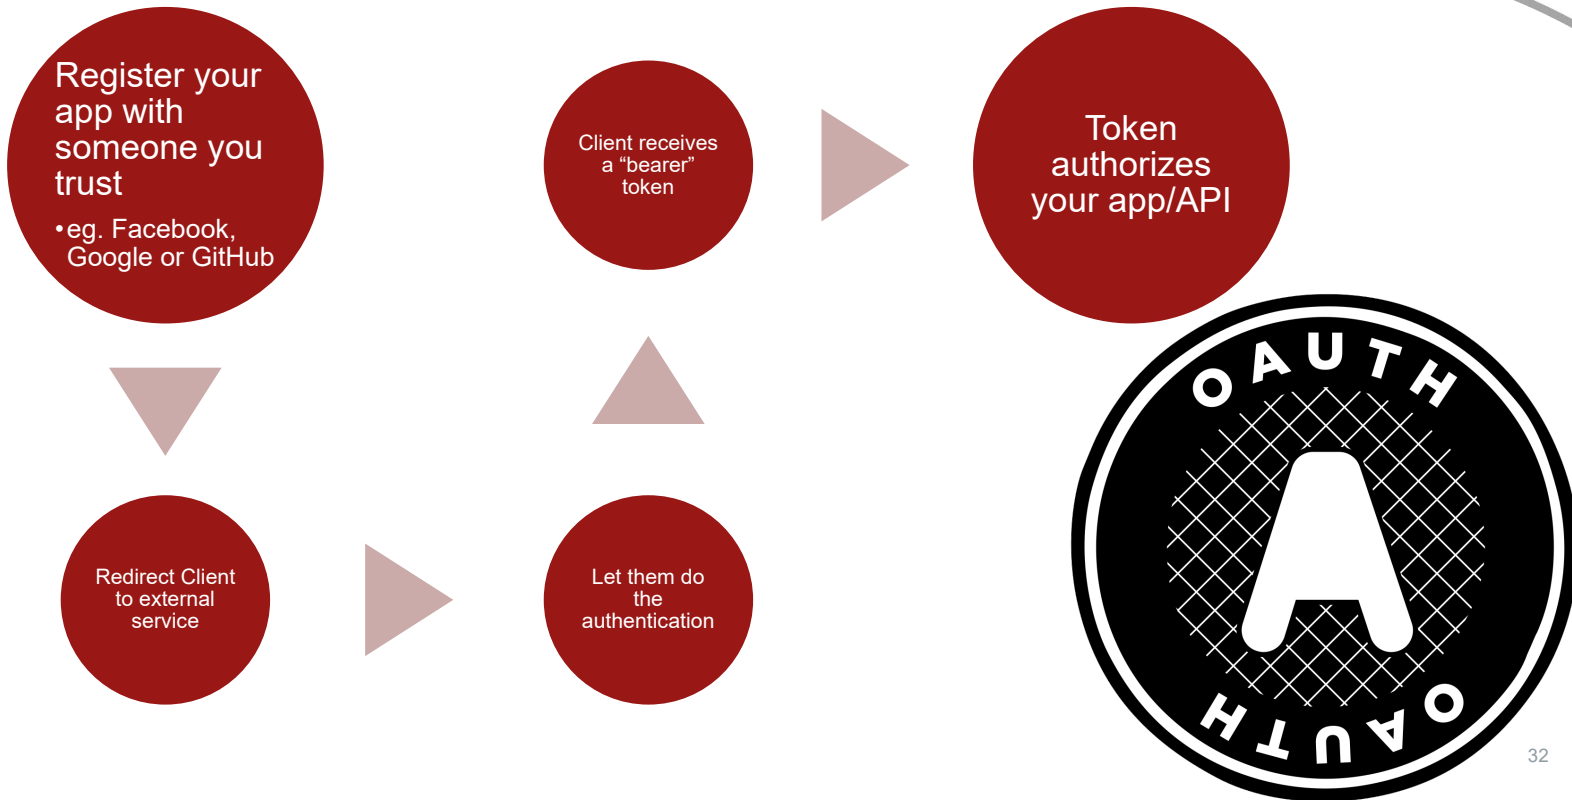

- Let the http-Server do the Job

OAuth

- Let someone else authenticate and
- bear a token

The Idea behind OAUTH

Define

Roles
Privileges

Assign Privileges

by Module
by Resource (URI Pattern)

OAuth Token

Metadata in ORDS-Tables

API Documentation

Swagger

OPENAPI
INITIATIVE

Generate Swagger Doc

URL:

`<ords-base>/<schema-alias>/open-api-catalog/<module>/`

Example:

`curl http://localhost:8080/ords/util/open-api-catalog/static/`

```
{"swagger":"2.0","info":{"title":"ORDS generated API for StaticFiles","version":"1.0.0"},"host":"localhost:8080","basePath":"/ords/util/static","schemes":["http"],"produces":["application/json"],"paths":{"/":{"put":{"description":null,"responses":{"200":{"description":"output of the endpoint","schema":{"type":"object","properties":{}}}}},"consumes":["application/octet-stream"],"parameters":
```

[...]

The screenshot displays a Swagger UI interface for a PUT endpoint. The endpoint path is `/upload/{module}/{filename}`. The response body is a JSON object with the following structure:

```
{  "mime_type": "string",  "module": "string",  "filename": "string",  "body": "string"}
```

The parameter content type is set to `application/octet-stream` and the response content type is `application/json`. The response code is 200, with the description "output of the endpoint".
